CRASH DORK SECRETS

WHAT IS GOOGLE DORKS?

Google Dorks are special search queries used in Google to find hidden or sensitive information on websites that may not be easily accessible through normal searches. They use advanced search operators to help you find specific types of data or vulnerabilities.

HOW GOOGLE DORKS WORK?

Google indexes websites and content, including things like documents, files, and databases. By using Google's advanced search operators, you can narrow down your search to find specific things that are sometimes unintentionally exposed online.

[illegible]

EXAMPLES OF GOOGLE DORKS:

site: – Searches within a specific website or domain.

Example: `site:example.com`

This will only show results from the website "example.com."

filetype: – Finds specific file types.

Example: `filetype:pdf`

This will show all PDF files indexed by Google.

inurl: – Looks for specific words in the URL of a webpage.

Example: `inurl:admin`

This will show web pages that have the word "admin" in their URL.

intitle: – Searches for specific words in the title of a webpage.

Example: `intitle:"login"`

This will find pages with "login" in the title.

intext: – Searches for words within the text of a webpage.

Example: `intext:"username password"`

This will find pages that contain the text "username password."

Examples of Dork Queries:

`site:example.com filetype:pdf`

– Finds PDF files on a specific website.

Example: `intitle:"login"`

– Searches for exposed login text files.

Social Media Information

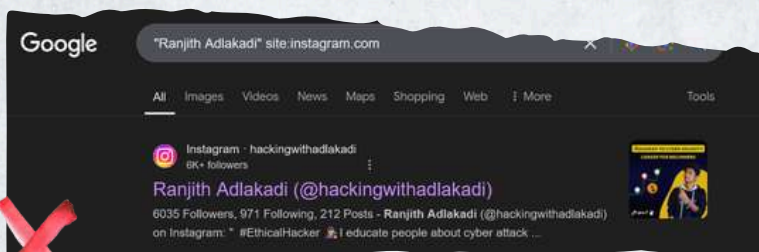

Find social media profiles using targeted queries:

LinkedIn: **"<Name>" site:linkedin.com**

Facebook: **"<Name>" site:facebook.com**

Twitter: **"<Name>" site:twitter.com**

Instagram: **"<Name>" site:instagram.com**

CRASH DORK SECRETS

Email and Contact Details

Search for publicly available contact information:

"<Name>" email OR contact

"<Name>" "@gmail.com" OR "@yahoo.com"

Check for accidental leaks:

"<Name>" site:pastebin.com

CRASH DORK SECRETS

Academic and Research Data

Discover research papers and academic profiles:

ResearchGate: **"<Name>" site:researchgate.net**

Google Scholar: **"<Name>" site:scholar.google.com**

University Mentions: **"<Name>" site:edu**

Company and Organizational Records

Locate professional or business information:

Crunchbase: **"<Name>" site:crunchbase.com**

AngelList: **"<Name>" site:angel.co**

GitHub: **"<Name>" site:github.com**

CRASH DORK SECRETS

Leaked Databases and Dark Web

Check for data breaches or leaks:

"<Name>" site:haveibeenpwned.com

"<Name>" inurl:leak OR inurl:dump

Government and Legal Records

Access government and legal records:

Government Mentions: **"<Name>" site:gov.in OR site:gov**

Legal Cases: **"<Name>" court case OR litigation site:indiankanoon.org**

CRASH DORK SECRETS

Additional OSINT Techniques

Enhance your research with these general-purpose dorks:

Resumes: **"<Name>" intitle:"resume"**

Presentations: **"<Name>" site:slideshare.net**

Profiles: **"<Name>" intitle:"profile" OR inurl:"profile"**

Combine with Location: **"<Name>" AND "city/state"**

Combine with Phone Numbers:

"<Name>" AND "phone" OR "mobile"

- "<Name>" site:drive.google.com

Apply
Now!

Google Dorks allow you to search for publicly available personal information by using specific search queries. By searching for your name, email, and phone number, you can identify if and where your personal details are exposed online, helping you monitor your digital footprint and take action to protect your privacy.
